

Pocket Chamber®

Anti-Static Valved Aerosol Holding Chamber

Redefining Patient Care Beyond Expectations

Pocket Chamber® uses anti-static material for more effective medication delivery, to improve patient outcomes.

Redefining Patient Care — Diagnostic Confidence

The revolutionary design houses a whistle alarm to warn patients when optimal inspiratory rate is exceeded. Pocket Chamber's highly sensitive one-way silicone valve ensures accurate drug delivery by preventing inadvertent exhalation into the chamber. The precision design also minimizes airflow restriction.

Redefining Patient Care — Improving Outcomes

As a part of our family of asthma and disease management products, Pocket Chamber embodies years of dedication for advancing the quality of lung health.

We continue redefining patient care so that you can achieve improved patient outcomes, more efficiently, more profitably.

Redefining Patient Care — Proven Technology

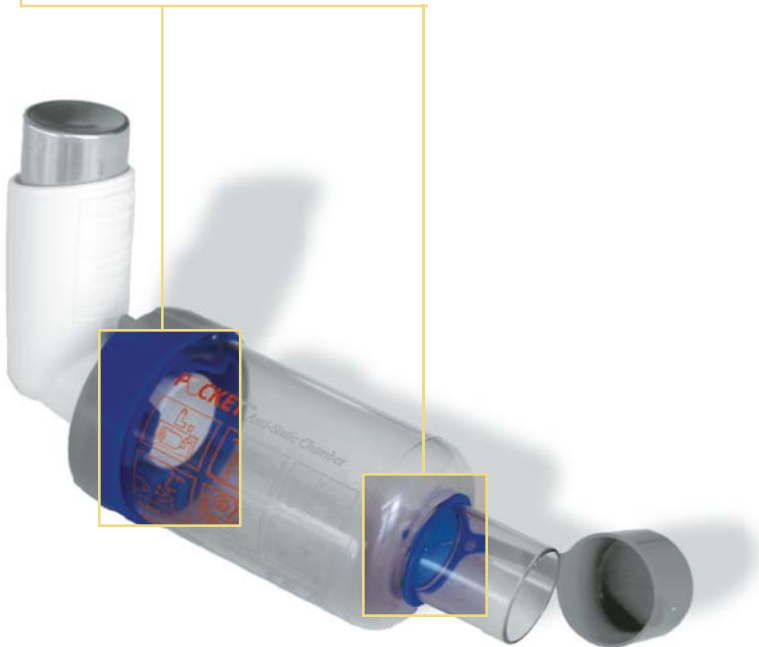

- **Anti-Static Material.** Designed to increase the effectiveness of drug delivery by significantly reducing the electrostatic attraction of the interior surface.
- **Whistle Alarm.** Ensures effective drug delivery with built-in whistle to alert patient when optimum inspiratory rate is exceeded.
- **One-way Valve.** Opens easily to ensure accurate delivery without restricting airflow.
- **Revolutionary Design.** Pocket-sized for patient convenience while maintaining the effectiveness of MDI Chambers nearly twice its size.
- **Flexible Fitting.** Conveniently fits all major metered dose inhalers.

Redefining Accuracy. Beyond Expectations.

Pocket Chamber is designed to bring you the most effective drug delivery at the lowest cost of operation.

Pocket Chamber fits virtually any metered dose inhaler and is more cost effective than nebulizer delivery.

Technical Specifications

Size:

108 x 47.5 mm

Volume:

110 ml

Mouthpiece:

22mm OD

Weight:

33 grams
